## **Executive Summary**

This thesis is about sports derivatives. About markets, trading, regulation, pricing and new ideas on sports derivatives. Here is a look at what sports derivatives are and what they are not. In this thesis there was found out that they are not gambling although it is about betting. There is information about information markets being better predictors than polls. Regulation is detected to be the worst enemy of sports derivatives markets and there is a suggestion to use sports derivatives for hedging against performance risk.
